Overview

ABSTRACT

Maternal and Child Health Project (MCH)

The Maternal and Child health project is made up of two components; the Maternal and the Child components. The project is investigating all children born in the NUHDSS since September 2006 and their mothers, for a minimum of three years. Visits are made to the eligible households every four months. The main objectives of the study are:

Study Objectives

Child Health Component

1. To examine the effect of migration, poverty, household composition, and environmental factors on morbidity and mortality of under-five children living in informal settlements
2. To investigate patterns of malnutrition, morbidity and mortality; main diseases and causes of death among neonates, infants and children
3. To examine the effect of environmental factors on under-five childhood morbidity, health-seeking behaviour (e.g. immunization, treatment of illnesses), and mortality
4. To determine how mothers (caretakers) overcome or mitigate adverse environment exposures

Maternal Health Component

1. To examine maternal health outcomes and postpartum reproductive and sexual behaviour and how these are affected by poverty and migration status,
2. To investigate the socioeconomic and service-related factors associated with use of MH services and the direct and indirect pathways of the determinants of adverse pregnancy outcomes
3. To examine patterns of sexual and contraceptive behaviour among postpartum women and how these are linked to reproductive intentions and HIV risk perception

Methods

- The project follows up all children born in the DSS area since September 2006 and their mothers, for a period of 4 years (Jan 2007 - Dec 2010)
- We administer structured questionnaires to the eligible children's mothers or their guardians to collect information on

morbidity, health seeking behavior, cause of death (for those who have died)

- We collect anthropometric measurements from all children every round to monitor nutritional status and growth
- Through the NUHDSS and the questionnaires for the MCH projects, we collect socioeconomic, demographic, migration and pregnancy outcome data for all the mothers and their households

Data Collected

- Background characteristics
- Antenatal care, delivery and post natal care
- Birth histories for the mothers
- Child's vital health Status
- Breastfeeding and child feeding practices
- Anthropometric measurements for children
- Vaccination history
- Child morbidity and health seeking practices
- Post partum sexual activity
- Postpartum contraceptive use

Data Processing

Data Editing

Data editing took place at a number of stages throughout the processing, including:

- a) Office editing and coding
- b) During data entry
- c) Structure checking and completeness
- d) Secondary editing

Detailed documentation of the editing of data can be found in the "Standard Procedures Manual" document provided as an external resource.

Some corrections are made automatically by the program (80%) and the rest by visual control of the questionnaire (20%).

Other Processing

Data entry was performed manually at APHRC's headquarters on desktop computers and was done using an in-house built system with a Visual Basic.Net front-end and a Microsoft SQL Server back-end. Double data entry was carried out on 10% of the questionnaires.

Data were processed in clusters, with each cluster being processed as a complete unit through each stage of data processing. Each cluster goes through the following steps:

- 1) Questionnaire reception
- 2) Office editing and coding
- 3) Data entry
- 4) Structure and completeness checking
- 5) Verification entry
- 6) Comparison of verification data
- 7) Back up of raw data
- 8) Secondary editing
- 9) Edited data back up

After all clusters are processed, all data is concatenated together and then the following steps are completed for all data files:

- 10) Export to STATA 10 in 3 files (MCH, MCH Illness, MCH Calendar)
- 11) Recoding of variables needed for analysis
- 13) Structural checking of STATA 10 files
- 14) Data quality tabulations
- 15) Production of analysis tabulations

Details of each of these steps can be found in the Standard Procedures Manual.

Data Appraisal

Estimates of Sampling Error

No estimation of sampling errors was done.
